SKILLS

React, Redux, Ruby, Rails, Python, Javascript, Java, Django, C, CSS3, SQL, git, jQuery, AWS, Docker, TDD, OOP, Node.js

EXPERIENCE

Freelance and Contract Web Development

June 2018- January 2019

- Engineered and designed sites for 50 companies ranging in size from 2-500 employees using Rails, React, Redux, jQuery, CSS, AWS, Docker, HTML5, Django, MySQL, PostgreSQL, Google Analytics and other JS libraries.
- Utilized many different API's and libraries, including various online shopping API's and multiple AWS services including VPC.

Congressional Web Developer

US Congress

January 2018 - June 2018

- Engineered internal site using Ruby on Rails and Javascript for managing and streamlining constituent requests and services.
- Designed, administered and maintained constituent services website using Rails that received 50,000 visitors a day.
- Utilized Intranet Quorum database software to access and document the dozens of daily constituent services requests, including progress tracking and contact information.
- Communicate directly with over 100 constituents daily, both via phone and email to track status, including such diverse areas as political requests to veteran affairs, including over 30 requests for issuance or replacement of war medals as far back as World War II, of which over 90% of were successfully issued or replaced.
- Organized monthly town hall meetings that were attended by over 200 people.

PROJECTS

StackOverTroubledWater (Rails, React, Redux, SQL, npm, webpack, CSS, HTML, Heroku) | Sole Developer

[live](#) | [github](#)

Single Page Stack Overflow clone built with a Ruby on Rails API backend and React and Redux Frontend.

- Developed Redux and React single page app implemented with dynamic DOM changes to allow real-time updates without reloading the page or rendering any unchanged components of the page, dramatically shortening load times.
- Designed efficient SQL queries to transfer information efficiently from backend to frontend using a custom JQuery JSON API customized to the requirements of the project, minimizing Rails backend load and total SQL queries by over 90%.
- Engineered user privacy through frontend and backend authentication measures using BCrypt and React Router, allowing users to only post and make changes to their own posts, comments, and answers when logged in and verified.
- Implemented answers and comments to posts to include code formatting, images, links, and other user formatting such as bold and italics with React Quill integrated into the site.

SuperTetris19 (JavaScript, HTML5 Canvas, npm, webpack, CSS, HTML) | Sole Developer

[live](#) | [github](#)

HTML5 Canvas ES6 JavaScript clone of Tetris.

- Developed using HTML5 Canvas with OO ES6 JavaScript to give an engaging visual and audio experience using native JavaScript.
- Engineered with separation of logic and presentation using Object Oriented ES6 classes, for upgradability and readability.
- Designed complete clone of the classic game, including modern additions such as hold and next piece preview.
- Implemented with webpack and babel configuration to serve even legacy browsers with a modern JavaScript ES6 Application reaching over 99% of users by browser market share.

GraphPie (Python, tkInter, NumPy, SciPy Matplotlib) | Sole Developer

[live](#) | [github](#)

Python graphing of mathematical functions, with both a GUI and CLI to a single Python OO backend.

- Engineered cross platform compatible GUI application that runs on all three major operating systems and BSD.
- Designed to graph and compare up to 20 datasets at once on a single window.
- Implemented graphing multiple functions on the same window for easy comparison, with zoom and scale modification.
- Formulated with separation of concerns and OO design to allow both the GUI and CLI to use the same backend eliminating code duplication.

EDUCATION

Web Development - App Academy

Spring 2019

1000+ hour intensive software development training program with a 3% acceptance rate.

Bachelor of Science in Decision Science - Carnegie Mellon University

Winter 2017

Specialized CS Coursework: Python, Java, Principles of Computing, Algorithms and Data Structures, Advanced Programming Techniques, Computer Networks, Statistics with Python, NumPy, SciPy.
